

NEW BILLY BOB'S Loft and Lie Adaptor

Installation Instructions

Fits all New Callaway Hoseless Clubs

This adaptor will fit all the newer .350 hosel Callaway clubs (VFT ERC II, Big Bertha II, 460, FT5, FTi). You must use a .335 shaft for this to work. If you use a .335 head you will need to ream it out to .350. You will need to remove all of the epoxy residue within the hosel to assure good adhesion and have room for the shaft and the ferrule to rotate to the desired position. There will be a missing mark on the ferrule (see Indicator Mark Missing Line illustration above). This is the indicator mark that will allow you to see which position you need to face the ferrule for loft and lie. Once you have achieved the proper angle, you can mark the top of the head so, when you glue the head and the shaft, you can go back to the position that you set.
